

U.S. GOLD
CORP

On track to be Americas Next Gold & Copper Mine

Combining Near-Term Production Potential with District-Scale Exploration in Mining Friendly U.S. Jurisdictions

May 2026

Forward Looking Statements

TERMS OF USE AND DISCLAIMER - This presentation is being provided for the sole purpose of providing the recipients with background information about U.S. Gold Corp. (“U.S. Gold” or the “Company”).

U.S. Gold has made reasonable efforts to ensure that the information contained in this presentation is accurate as of the date hereof, however, there may be inadvertent or unintentional errors. No representation, warranty or guarantee, express or implied, is made as to the fairness, accuracy, completeness or correctness of the information contained in this presentation, including the accuracy, likelihood of achievement or reasonableness of any forecasts, prospects, results or statements in relation to future matters contained in this presentation. The views and information provided herein are based on several estimates and assumptions subject to significant exploration, business, economic, regulatory and competitive uncertainties. For more information on these estimates, assumptions, and uncertainties, see “Forward-Looking Statements” below. U.S. Gold is not liable to any recipient or third party for using or relying on the information in this presentation. This presentation provides information in summary form only, is not intended to be complete and does not constitute an offer to sell or the solicitation of an offer to buy any security. Further, this presentation is not intended to be relied upon as advice to investors or potential investors. It does not constitute a personal recommendation or consider the investment objectives, financial situation or needs of any particular investor. U.S. Gold is not acting as an agent or advisor and encourages the use of independent consultants, as necessary, prior to entering into transactions.

FORWARD-LOOKING STATEMENTS – Except for the statements of historical fact contained herein, the information presented in this presentation may constitute “forward-looking statements” within the meaning of United States securities and other laws. These statements may be identified by the use of forward-looking words and phrases such as “plans,” “expects,” “is expected,” “budget,” “scheduled,” “estimates,” “forecasts,” “intends,” “aims,” “anticipates,” “will,” “projects,” or “believes” or variations (including negative variations) of such words and phrases, or statements that certain actions, events, results or conditions “may,” “could,” “would,” “might” or “will” be taken, occur or be achieved. These forward-looking statements include statements related to the Company’s 52-week stock range and 12-month target price; the CK Gold Project, including, potential benefits to the State of Wyoming in connection with the project, the project’s potential mine closure scenario, expectations that the project preserves attractive all-in sustaining costs, the project’s viability as a producer of high-quality aggregate and rail ballast and the corresponding market demand for aggregate and rail ballast near the project, engineering optimization and on-going studies at the project, the anticipated timing of receipt of the Air Quality Permit, anticipated timing of completion of the final Feasibility Study, potential funding opportunities, and viability of project site as potential water reservoir; the Keystone Gold Project, including, potential for Carlin-type gold deposits, future proposed drilling of targeted areas, and potential partnership opportunities with industry leading companies; the Company’s potential for near-term production in Wyoming; and the Challis Gold Project’s potential as an exploration project. By their very nature, forward-looking statements are subject to numerous risks and uncertainties, some of which are beyond our control. Forward-looking statements are based on the opinions and estimates of management at the date the statements are made, as well as a number of assumptions made by, and information currently available to, U.S. Gold concerning, among other things, anticipated geological formations, potential mineralization, future plans for exploration and/or development, potential future production, drilling exposure, and exploration budgets and timing of expenditures, all of which involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievement of U.S. Gold to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Factors that could cause actual results to vary materially from results anticipated by such forward looking statements include, but are not limited to, risks related to current and future exploration activities, risks faced by junior mining companies generally engaged in exploration activities, the Company’s need for significant additional capital, changes in government legislation, changes in ownership interest in a project, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, future prices and volatility of gold, copper and other metals, environmental risks and hazards, infrastructure and/or operating costs, labor and employment matters, availability of financing, permitting availability, government regulation, changes in equity markets, changes in interpretations of geological, geostatistical, metallurgical, mining or processing information, the validity of the Company’s title to its properties, increases in costs and exchange rate fluctuations, the Company’s dependence on key personnel, as well as those factors discussed in Company’s filings with the U.S. Securities and Exchange Commission (SEC), including the Company’s most recent Annual Report on Form 10-K, Quarterly Reports on Form 10-Q, and Current Reports on Form 8-K filed with the SEC, which can be reviewed at www.sec.gov.

Although U.S. Gold Corp. has attempted to identify important factors that could cause actual results to differ materially, other factors may cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. U.S. Gold disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, other than as required by applicable law. Accordingly, readers should not place undue reliance on forward-looking statements of U.S. Gold, which should be considered highly speculative.

Cautionary Note Concerning Mineral Resources

Estimates of “measured,” “indicated,” and “inferred” mineral resources, as well as “proven” and “provable” mineral reserves shown in this presentation with regard to the properties of the Company are defined in Subpart 1300 of Regulation S-K promulgated by the SEC (“S-K 1300”). The estimation of measured resources and indicated resources involves greater uncertainty as to their existence and economic feasibility than the estimation of proven and probable mineral reserves. The estimation of inferred resources involves far greater uncertainty as to their existence and economic viability than the estimation of other categories of resources. Investors are cautioned not to assume that any or all of the mineral resources are economically or legally mineable or that these mineral resources will ever be converted into mineral reserves.

What Makes U.S. Gold Corp. Unique

- World-class portfolio, in stable and mining friendly U.S. jurisdictions, offering investors both near-term gold-copper production potential and blue-sky exploration upside.
 - **CK Gold Project in Wyoming** offers compelling value with **approved development and operating permits** advancing towards construction in an advantageous location.
 - **Keystone Gold Project in Nevada** offers significant **exploration opportunity**, situated 11 miles on-trend south of Nevada Gold Mines' Cortez Complex, the second largest gold producer in NV.
 - **Challis Gold Project in Idaho** offers gold exploration potential in Idaho's historic mining district and ~12 miles SW of Revival Gold's "brownfield" Beartrack-Arnett Project.
- Team of proven mine financiers, builders and explorers who have discovered and developed numerous world-class gold mines.
- Minimal share count (~16.5M shares outstanding), listed on NASDAQ including large insider holdings.

George Bee

President & CEO, Director

Mr. Bee has managed multiple world-class mining projects in 8 countries for major and junior mining companies. He has taken several mines from development to production and recently was a Sr. VP for Barrick Gold. He also worked for Rio Tinto and Anglo American as well as several junior mining companies in his distinguished mining career.

Kevin Francis

VP Exploration and Tech. Services

Mr. Francis has held many senior roles in the mining industry from VP of Technical Services to Principal Geologist in prestigious consulting firms and major mining companies for over 38 years

Robert Schafer

Mr. Schafer is a geologist with +40 years of international experience including discovering deposits that have become producing mines. He is the past President of The Society for Mining, Metallurgy, and Exploration, PDAC, and MMSA.

Johanna Fipke

Ms. Fipke is a partner at Fasken Martineau Dumoulin LLP with a focus on mining and land related law. She is a Director and founding member of Women in Mining British Columbia

Luke Norman

Non-Independent Chairman

Mr. Norman has over 20 years of experience in Venture Capital Markets and has raised more than \$300 million dollars for mining companies. He is also a Co-founder of U.S. Gold Corp.

Eric Alexander

Chief Financial Officer

Mr. Alexander has over 35 years of business experience, and 20 years in the mining industry. He is also a CPA.

Michael Waldkirch

Mr. Waldkirch is a CPA in both the US and Canada and worked in mining for 25 years.

Independent Directors

2,000	127	10.20%	98	8.50%	5.6
1,500	-126	0.00%	-147	0.00%	15.8

Feasibility Study Changes

- Project optimizations
 - Jameson cell flotation
 - Smaller plant footprint
 - Vacuum Filtration of tailings
- Increased gold, copper and silver prices
- Tariffs and Inflation impacts on operating and capital costs
- Initial capital cost increases due to design enhancements

*Source: SK-1300 Technical Report Pre-Feasibility Study on the CK Gold Project report to be released soon using \$3,250 Au, \$4.50 Cu and \$40 Ag. Please see “Cautionary Note Concerning Mineral Resources” in this presentation.

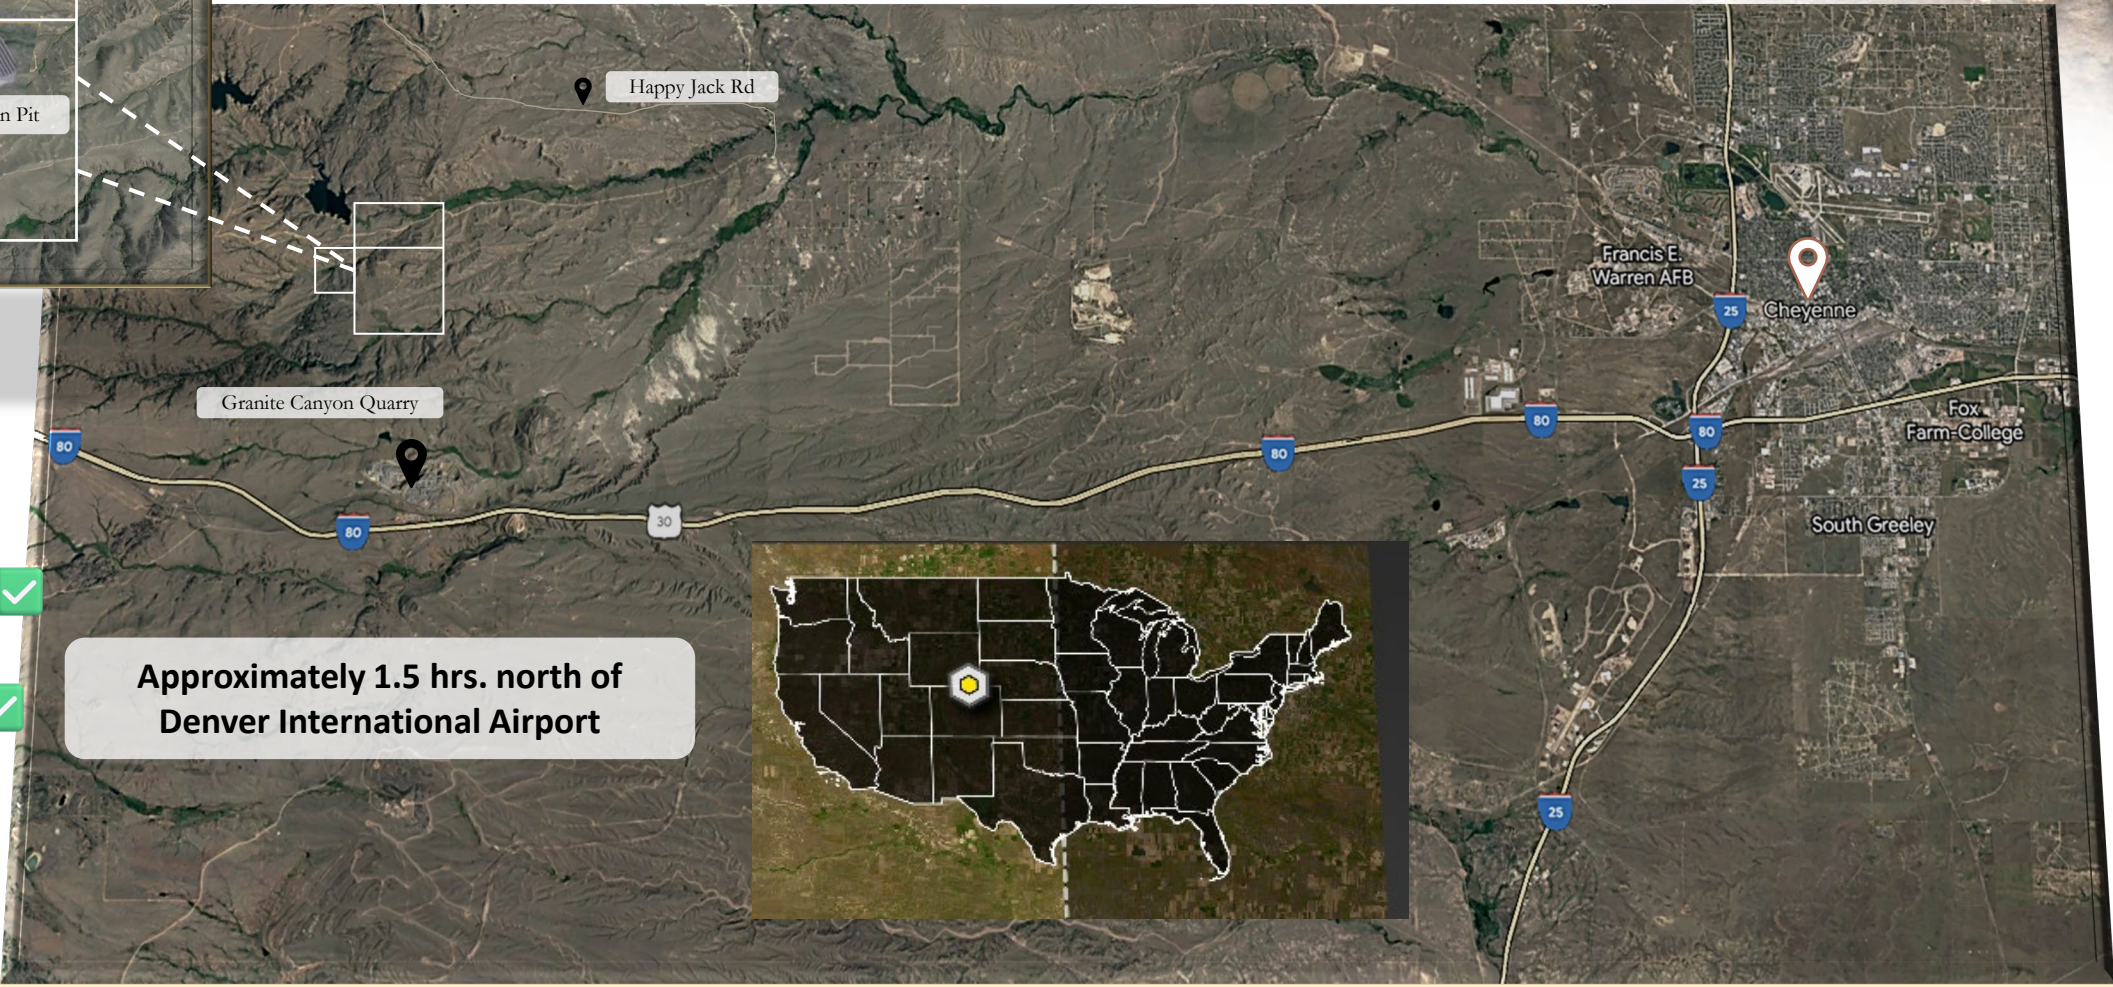

CK Gold Project - Location Makes a Huge Difference

Advantageously Situated Near Major Highways & Rail

~20 min. West of Cheyenne

~3 miles North of I-80

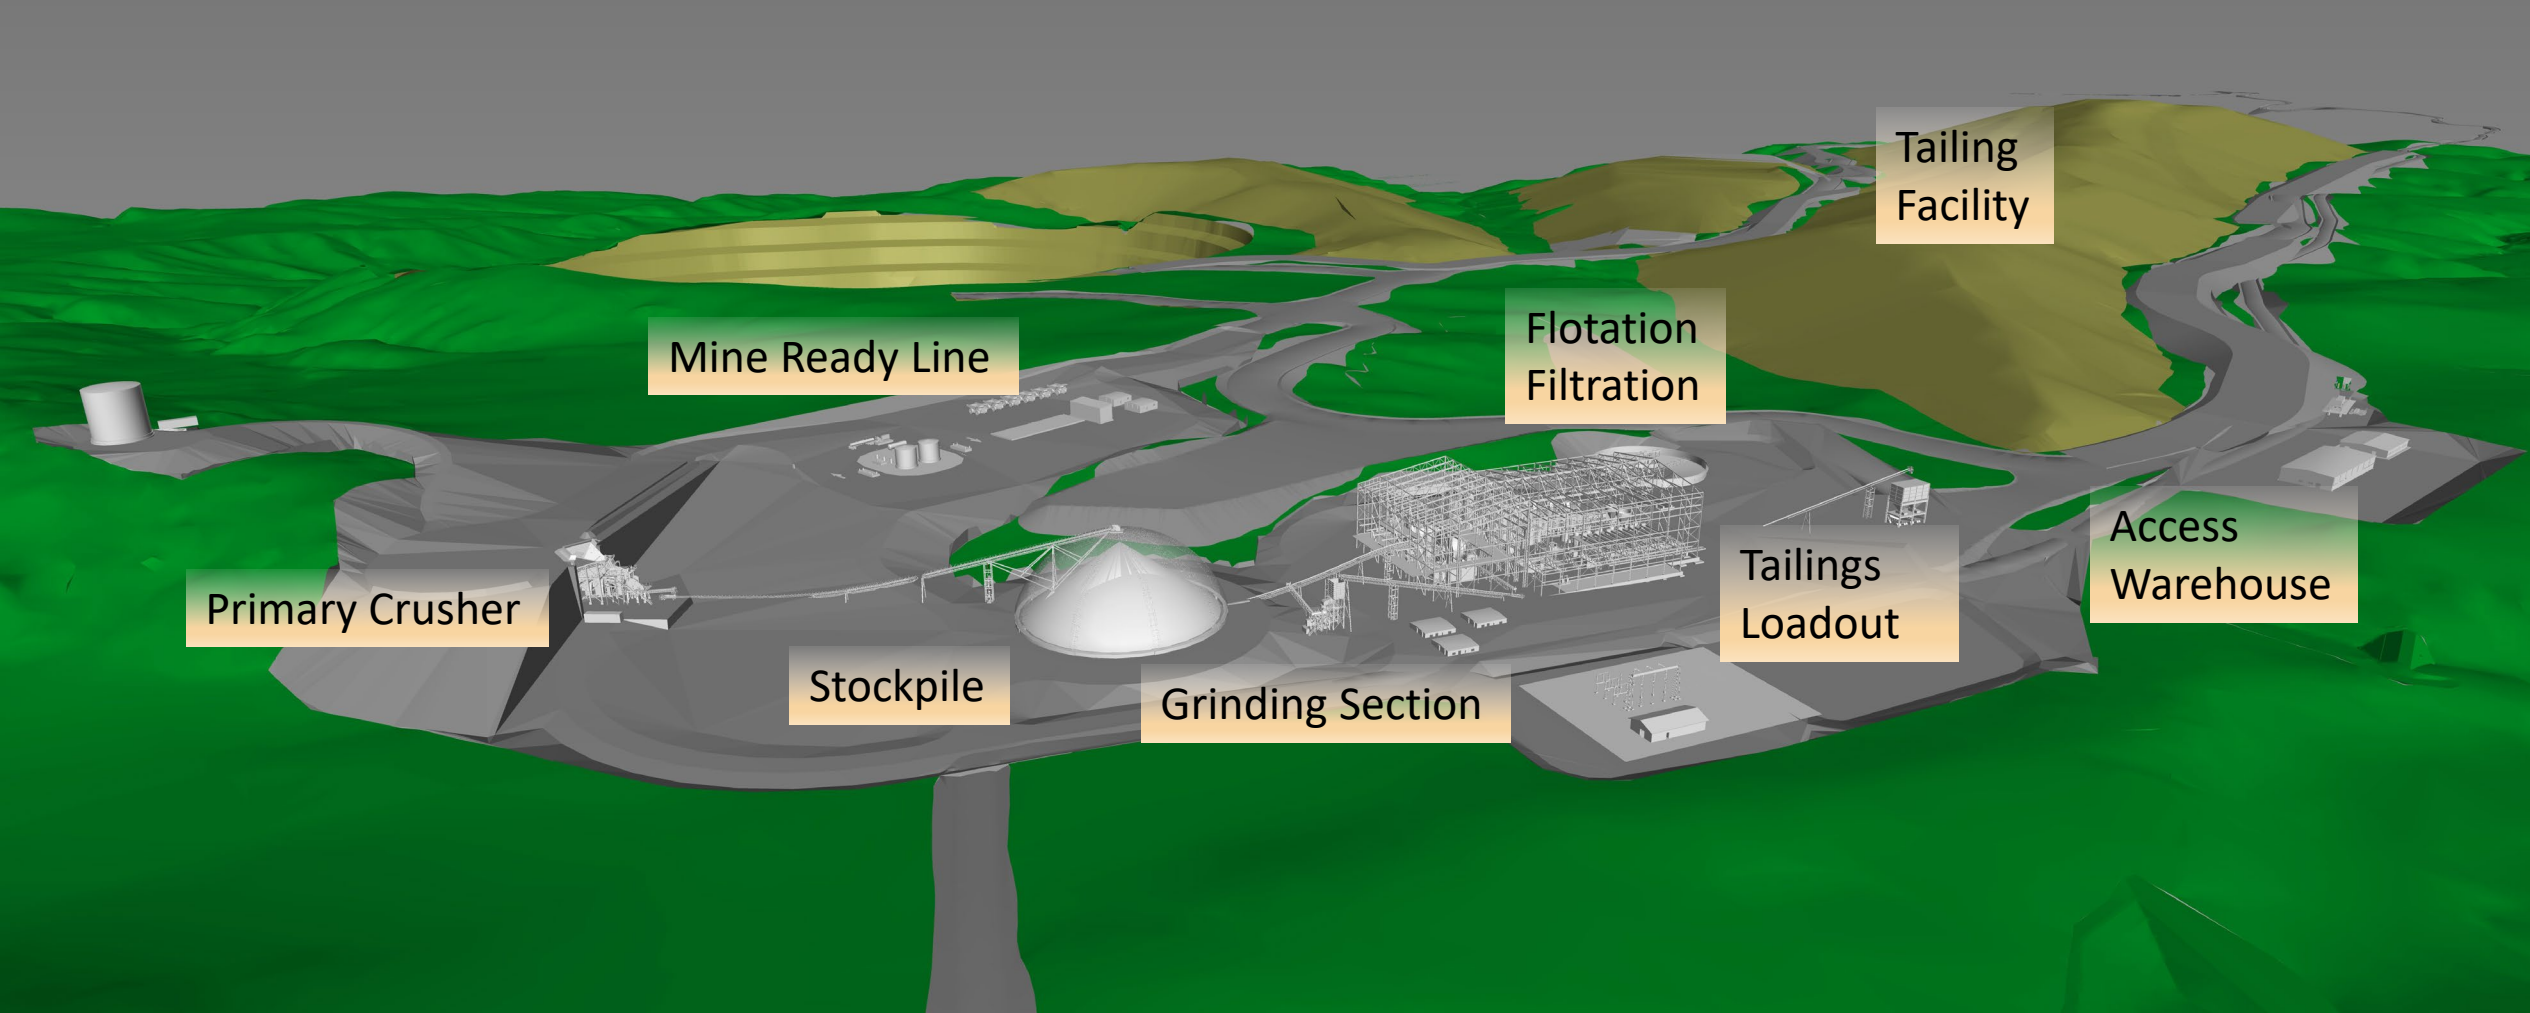

- Road Network ✓
- Water ✓
- Power ✓
- Manpower ✓
- Support Services ✓
- Contractors ✓
- Emerg. Services ✓
- Equipment providers ✓

Approximately 1.5 hrs. north of Denver International Airport

CK Gold Project Feasibility Study

CK Gold Project Feasibility Study

CK Gold Project – Advanced Engineering

Tailings
Loadout

Flotation
Filtration

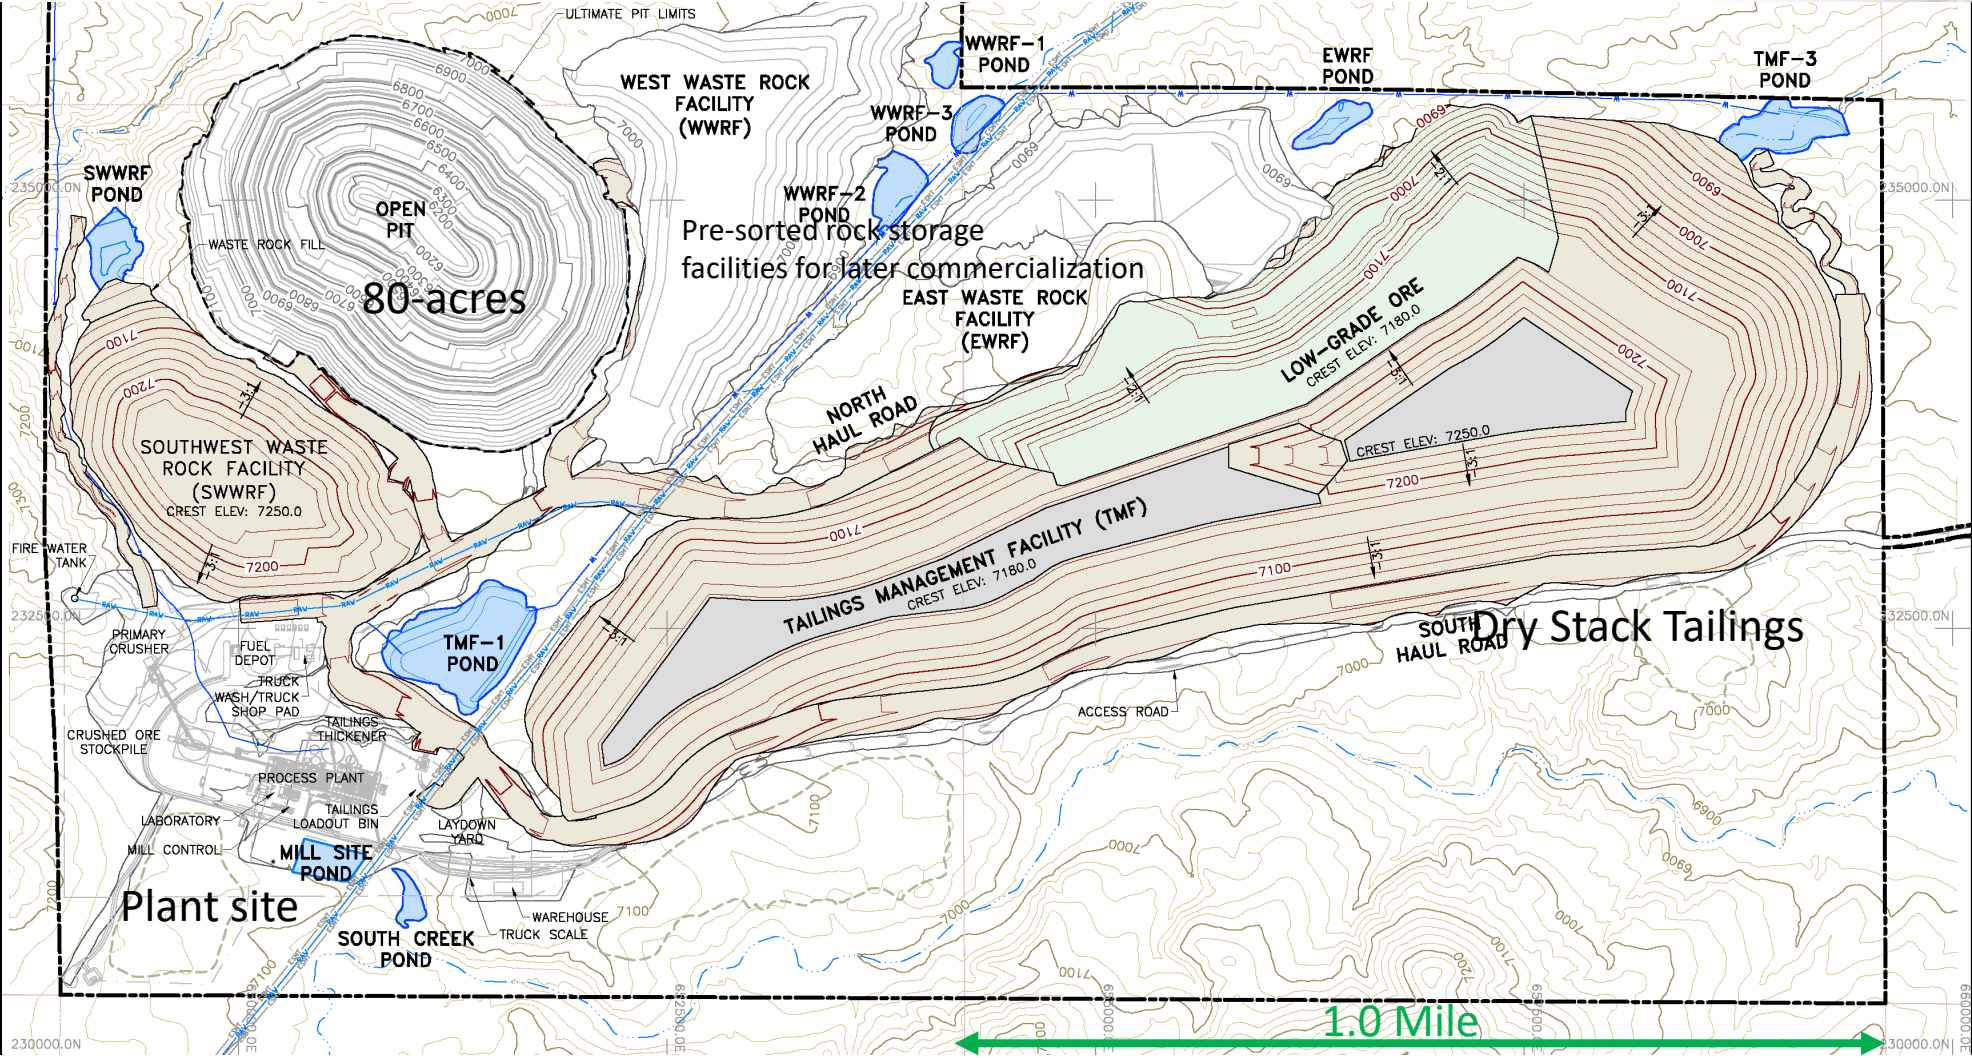

Grinding Section

Thickeners/tankage

- **Primary grind to 90 μ**
 - SAG mill
 - Ball mill
- **Rougher flotation**
 - Jameson cells
- **Regrind (Vertimill)**
 - 25 μ
- **Scavenger cleaner flotation**
 - Jameson cells
- **Concentrate filters and storage**
- **Tailings thickener and vacuum filtration**

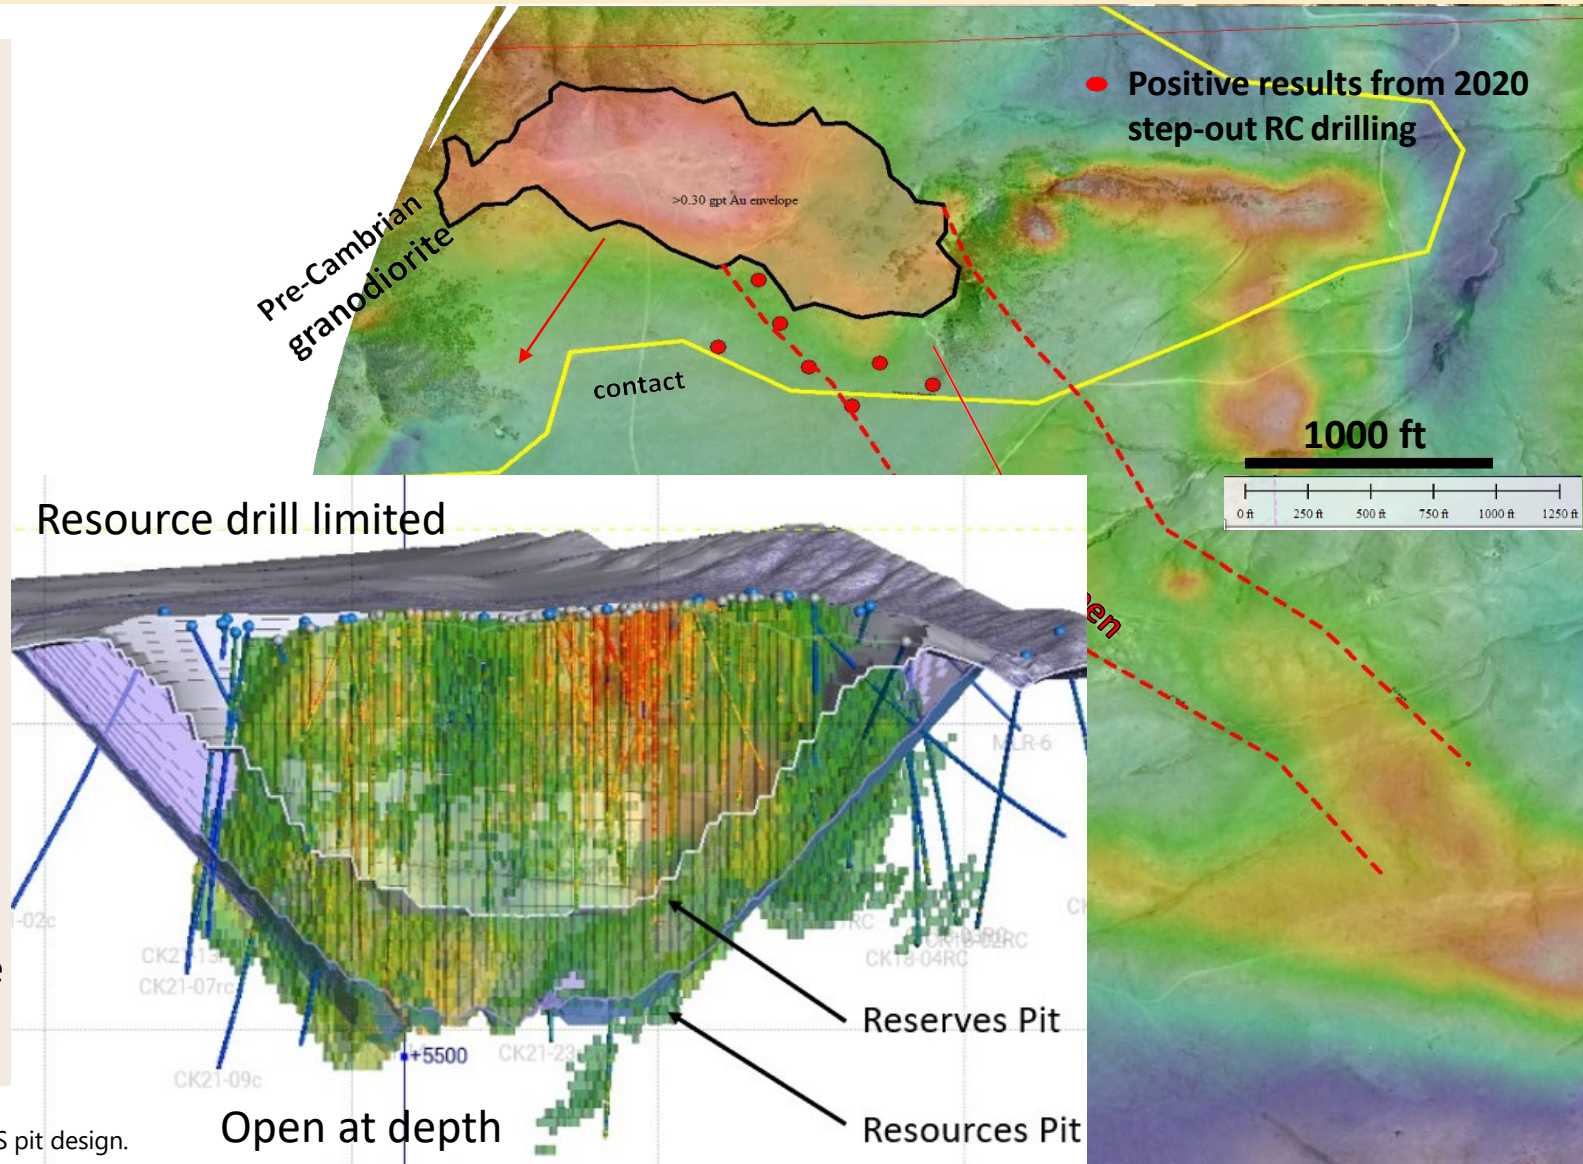

CK Gold Project – Site Plan

Mine access
4-miles to
paved State
road

1 Million Ounces Gold, 260 Mlbs Copper and Counting

- **1.598M AuEq** mineral reserves (1.015 Moz gold, 260 Mlbs copper, 3 Moz silver)
- Hosted in a granodiorite hosted shear zone. It's postulated (Sillitoe, June 2022) the deposit is a porphyry in origin and not isolated. As part of the Silver Crown Mining District other deposits occur locally
- 80% of historical drill holes end in mineralization or are not closed off laterally – deposit wide open
- Open at depth below 800 feet and southeast along strike; 2,900 ft of strike length untested
- Depth and strike length volumetrics sufficient to double current gold-copper resource if mineralization continues along strike
- Clean and simple mineralogy; low overall sulfide content. Clean high gold grade , copper concentrate
- Added resource = more potential aggregate rock

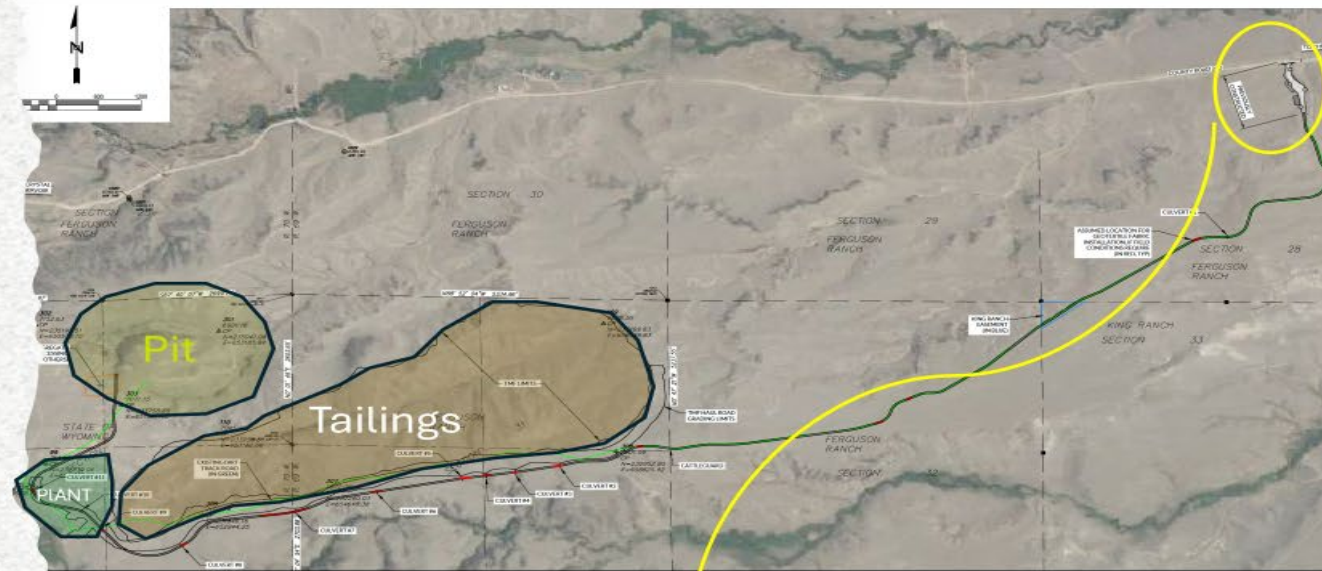

Perspective view looking North. Mineralization persists to the southwest outside the FS pit design.

What Makes The CK Project so Compelling?

- **Simple truck shovel mining scenario similar to nearby quarry operations**
 - Small truck (100-150 ton) and shovel/loader fleet (20 yd) with very short haul distance and easy terrain to mine and construct on
 - There are many fleets of existing equipment operated by cost competitive contractors
 - We have seen competitive fuel pricing in southeast Wyoming
- **Simple, well-proven crush, grind, flotation, and dry-stack tailing storage**
 - Producing a high-value gold-copper concentrate with little or no deleterious elements
 - Competitive power pricing from BHE that owns in-State generation
 - Clean operation with concentrate sent to off-site smelters, little or no emissions on site
 - Recycle vacuum filtered water to minimize water consumption
- **Proximity to Cheyenne means labor and support services nearby**
 - In a competitive labor market, the CK Gold Project is a prime location. No man-camp, short commute
 - Administration office in town 20-miles away along with support services
- **Excellent location diminishing the need for warehousing and critical spares**
 - OEM equipment supply hubs in Gillette WY, Denver, CO and Salt Lake City UT all within 6-hr drive

CK Construction Commences - Initial part of mine access road

- Initial works have commenced to improve access to the CK Project
 - Access staging area
 - 4-miles to initial open pit works
 - Rock stripping area ready for mine aggregate production
- Provides staging area and safely allows traffic to turn into project area without effecting public transit on County Road 210

- CK Gold is located on State of Wyoming land (no direct federal involvement) with royalty revenues earmarked for education. Approximately 255 local direct jobs to be created and many more indirect and induced employment opportunities.
- Wyoming is a resource state - generating significant revenues from the extractive sector (coal, oil & gas, trona). CK's gold and copper production will provide diversification to the State's mineral tax proceeds.
- With waste rock providing a potential source of aggregate for construction and rail ballast, the State stands to gain another royalty revenue stream, while the project gathers revenue from rock sales, reducing the project footprint and closure cost.
- Company to assist in developing water resources, reduces consumption employing equipment to recycle during operation. Post-mining frees developed water for domestic consumption and provides opportunity to store water in the exhausted pit.

Permitting and Social Outreach

- **Mine Operating Permit Approved – April 2024 - 10-year renewable term**
 - 2-years of preparatory work, and approximately 20 months of agency review and optimization to approval
- Agency - Wyoming Dept. Environmental Quality
 - May 2024: WYPDES (water discharge) permit approved
 - June 2024: Mine Reclamation Bond Acceptance
 - November 2024: Air quality permit application approved
- Outside Water Users Agreement
 - Cheyenne City Council approved (Nov. 2021)
 - Water purchase agreement approved (City Feb. 2022)

- **Industrial Siting Permit – June 2023, 3-year renewable term – updated through June 2027**
 - Unanimous approval from Industrial Siting Council. Construction initiated in January 2026
- No Federal involvement
 - Project footprint does not impact waters of the U.S. per U.S. Army Corp. of Engineers Jurisdictional Delineation
- Continuous Social Outreach
 - Over 200 separate meetings, over 300 individuals ranging from the Governor to various agencies, interested parties and individuals
 - Progress meetings with local land-owners – project description/ plans
- Mineral Lease conditions: Royalty 2.1%, operating restrictions lifted
- Wyoming State Parks (Curt Gowdy State Park)
 - Presentation to legislative committee October 2022 (photo below)

Mine Closure and Legacy Opportunities

CHEYENNE MUNICIPAL STORAGE LEVEL II PHASE I STUDY RESULTS PRESENTATION

Cheyenne, Wyoming, April 19, 2021

PROJECT TEAM

- Wyoming Water Development Commission
 - Tony Rutherford, Former Project Manager
 - Andrew Linch, Project Manager
- Trihydro Corporation – Prime Consultant
 - Todd Hanlin, Project Manager
 - Derrick Thompson, Assist. Project Manager
 - Herman Noe, Technical Advisor
- AVI Engineering – Civil Engineering
- Population and Demand Projections
 - RJH - Geotechnical Expertise
 - SWCA - Environmental Consultants

Mine Closure Plan Approved

- Contemplates partial pit back-fill
- Returning land to pasture and wildlife habitat

Potential Mine Closure Scenario

- Envisions the possibility of the completed open pit as water storage
- Eliminates the need to create additional water storage to cater to future City of Cheyenne growth
- Eliminates need to reclaim and relocate recreation facilities around local park
- Utilizes planned connections to the Cheyenne Board of Public Utilities for water supply
- Possibly a pump storage power generation project

CK Gold Project – Upside Potential

- The possible use of high-quality aggregate and rail ballast not captured fully in the FS; potential to provide significant upside to CK's NPV and additional royalty payments to Wyoming.
- Vibrant market for aggregate and ballast within trucking distance of the project. Market studies suggest a million tons per year off-take, which could be expanded through delivery to a rail head. Significant interest in aggregate from construction firms and a non-binding LOI for delivery of ballast to a major railway. For reference, the local quarry sells crushed stone for ~\$20-25/ton.
- CK mineral resource expansion – higher gold and copper prices incorporate much of the mineralization drilled outside the reserve pit.
- Engineering Optimization and Execution Plan
 - Glencore Technology Inc. – use of Jameson Cell flotation technology to improve recoveries, capital and operating costs has been adopted for inclusion in the FS
 - Potential improved gold recovery through later tailings treatment and optimized grind size
 - Project execution schedule shortening construction timeline improving IRR
 - Early contractor engagement resulted in improved capital cost and schedule

Fully Permitted

All major permits obtained, ready for development.

Advanced Engineering

Advanced engineering with process plant design at FS level with bids for major equipment being solicited. Initiated early contractor engagement

Aggregate Market Study

Potential to provide significant upside to CK Gold project NPV and additional royalties to Wyoming. Undergoing further study.

Attractive Future Potential Financing Options

Exploring traditional and non-traditional sources of funding including attractive vendor financing options.

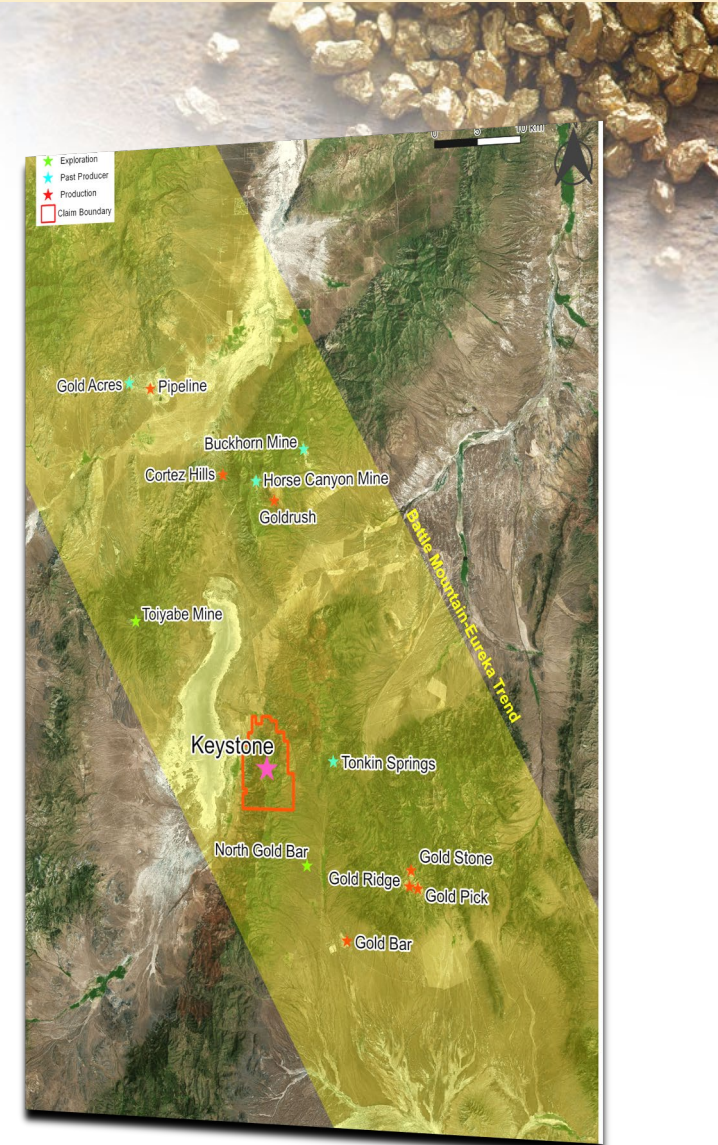

Water Development and Storage Opportunity

Hydrology, water monitoring and technical studies to assess viability of the exhausted open pit serving as a future potential water reservoir capacity.

Construction and Production

Finance and market dependent: advancing towards potential commercial production.

Nevada and Idaho Exploration Overview

Cortez Trend - An established gold mining jurisdiction

- Produced ~4.47M oz of gold in 2021 - approx. **78% of U.S. gold production**¹
- **6th largest** gold producing “country” in the world, if Nevada were a country
- Historically, Nevada has produced > 225M oz of gold, hosting numerous world-class deposits
- **“Elephant country”**: > 20M oz gold deposits
- Pro-mining environment, **geopolitical stability**, major infrastructure

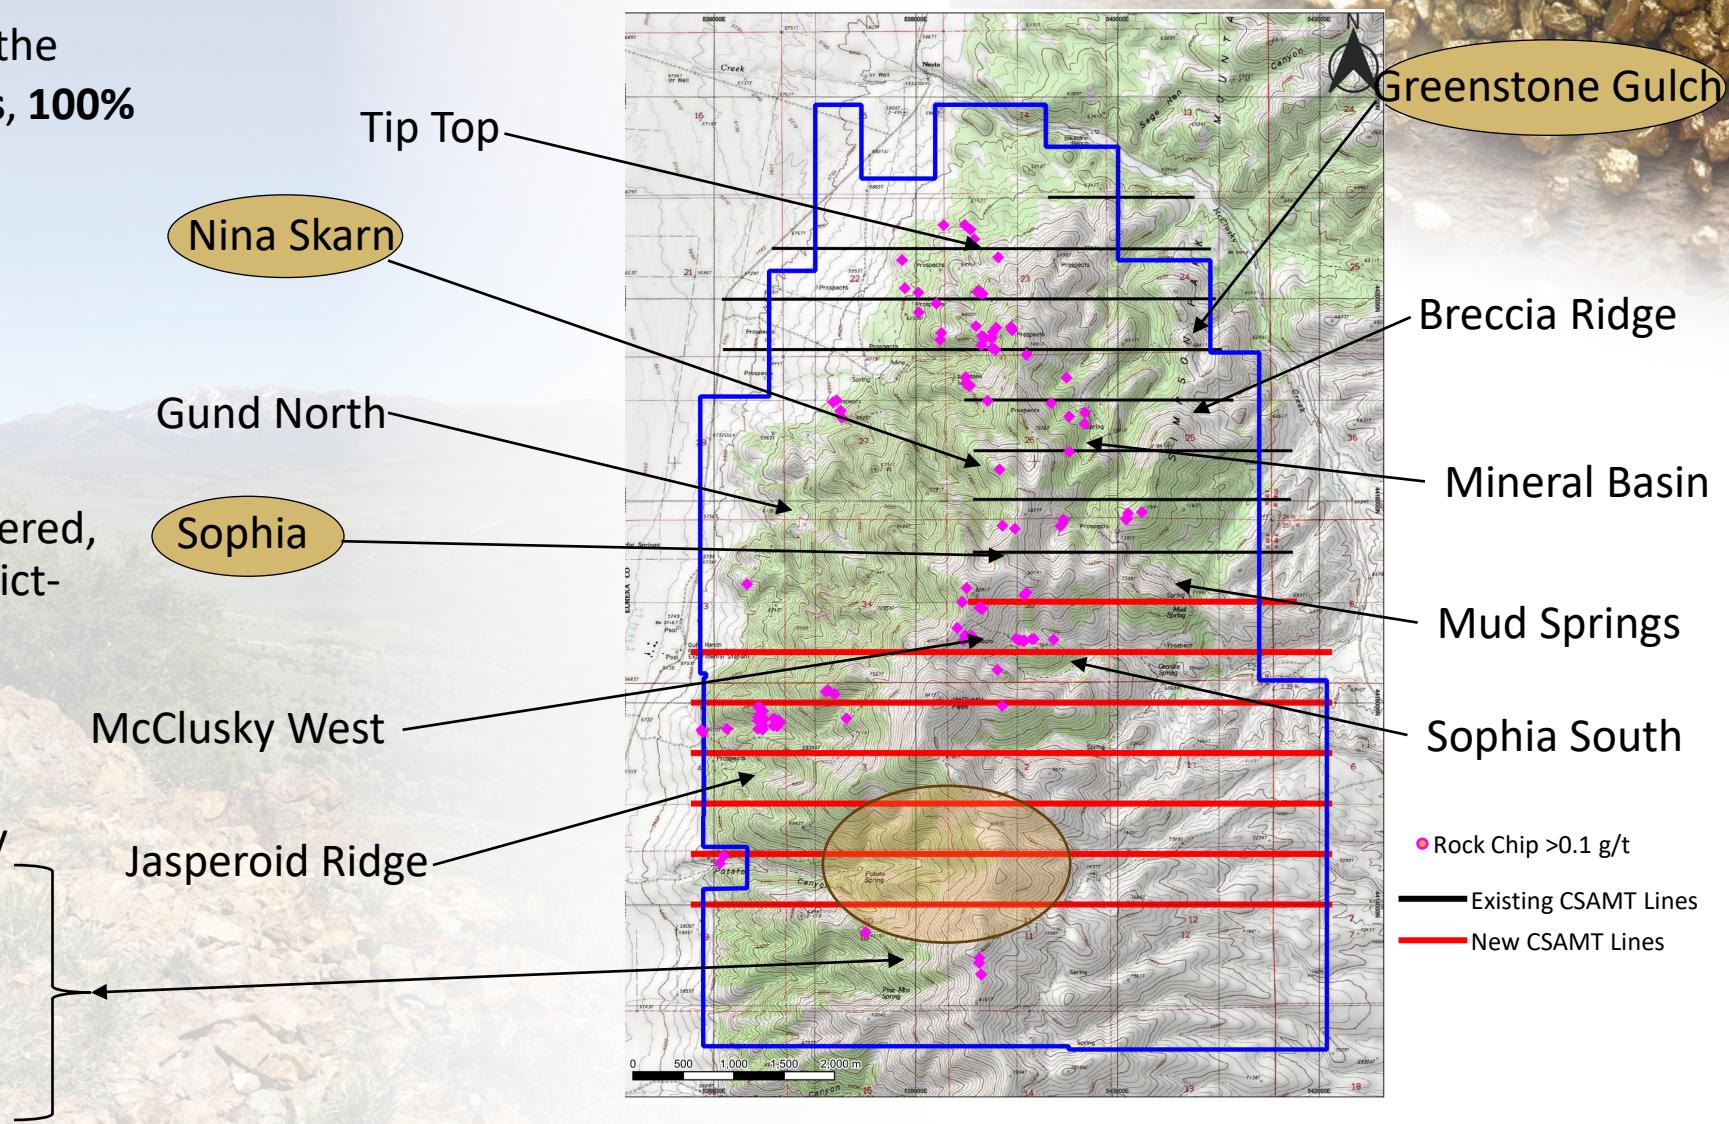

Keystone exhibits many similarities to Barrick’s deposits to the north; similar host rock, stratigraphy, structure and Eocene-aged intrusive rocks

1. USFunds.com

Priority Target Areas

- **Consolidated** an entire district on the **Cortez Trend, NV - 20 square miles, 100% controlled** by U.S. Gold Corp.
- **Never** systematically explored by model-driven, modern-day exploration techniques
- The **extent** and **intensity of the alteration** and the **thickness of permissive rock** packages encountered, highlight the potential of this district-scale mineral system
- Systematic exploration has primed Keystone for discovery
- Field checking targets identified by recent hyper-spectral survey has identified additional near-surface gold targets in an under-explored area of the claim block

Cortez Complex Comparison to Keystone

Keystone

- ✓ Shallow and deep targets are largely untested
- ✓ 20 square miles of geologic mapping, soil sampling and rock chip sampling
- ✓ Approved Plan of Operations for targeted drilling

Cortez

- ✓ Within Battle Mountain trend
- ✓ 11 miles north of Keystone

Cortez and Keystone Similarities

- ✓ Extensive Wenban Formation across the entire property
- ✓ Broad areas of high-grade trace metals
- ✓ Eocene-aged intrusives related to mineralization
- ✓ Porphyry and Carlin-type mineralization
- ✓ Dissolution collapse breccias
- ✓ High angle fault structures

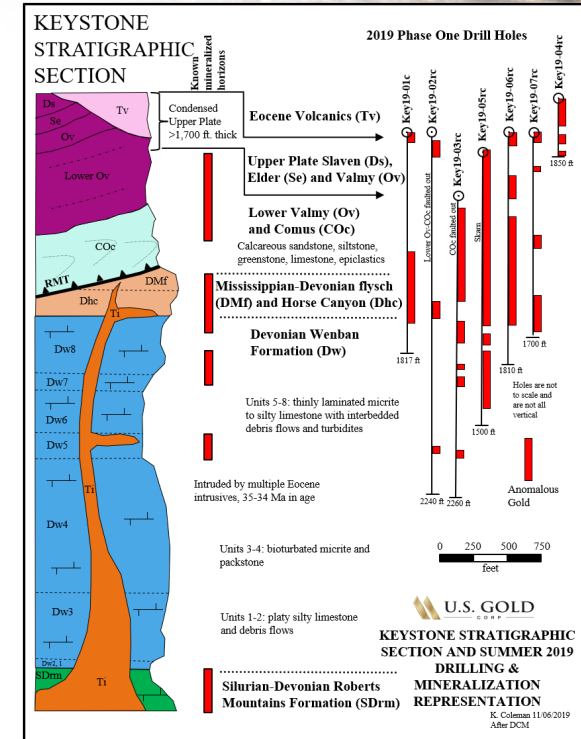

+51M oz gold - either produced or within mineral reserves and resources

Keystone Stratigraphy

- All holes encountered anomalous gold and strong pathfinder elements within thick favorable stratigraphy
- Hole Key19-05rc was first test of Nina Skarn target area

- Strongest continuous Au mineralization ever encountered at Keystone to date
- Altered, gold-bearing upper and lower plate rocks from surface to 414.5 meters
- Demonstrates the Keystone district scale project hosts a gold bearing Eocene magmatic-hydrothermal system

Extensive favorable stratigraphy

Keystone moved from scout hole to targeted drilling – vectoring toward discovery success

2019 targeted drilling of 7 holes

- High priority targets to follow up on 2018 results
- Provided a first test to several drill targets in areas previously inaccessible

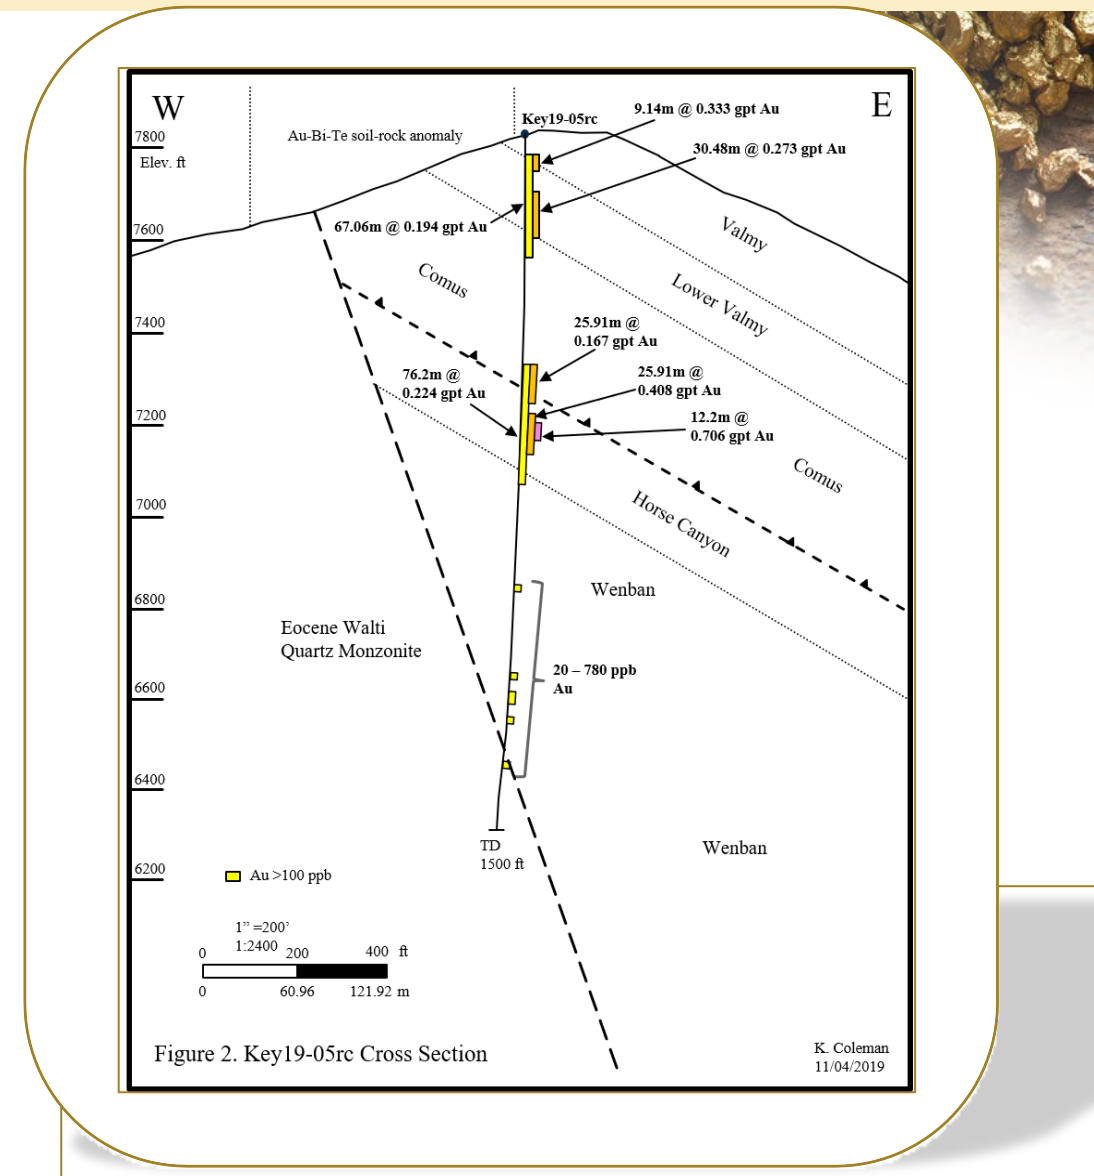

2026 Plan

- Leverage all geologic information via VRIFY AI. Geophysical surveys, drilling, surface geochemistry and surface mapping have been merged and development of new targets are underway

Future proposed drilling

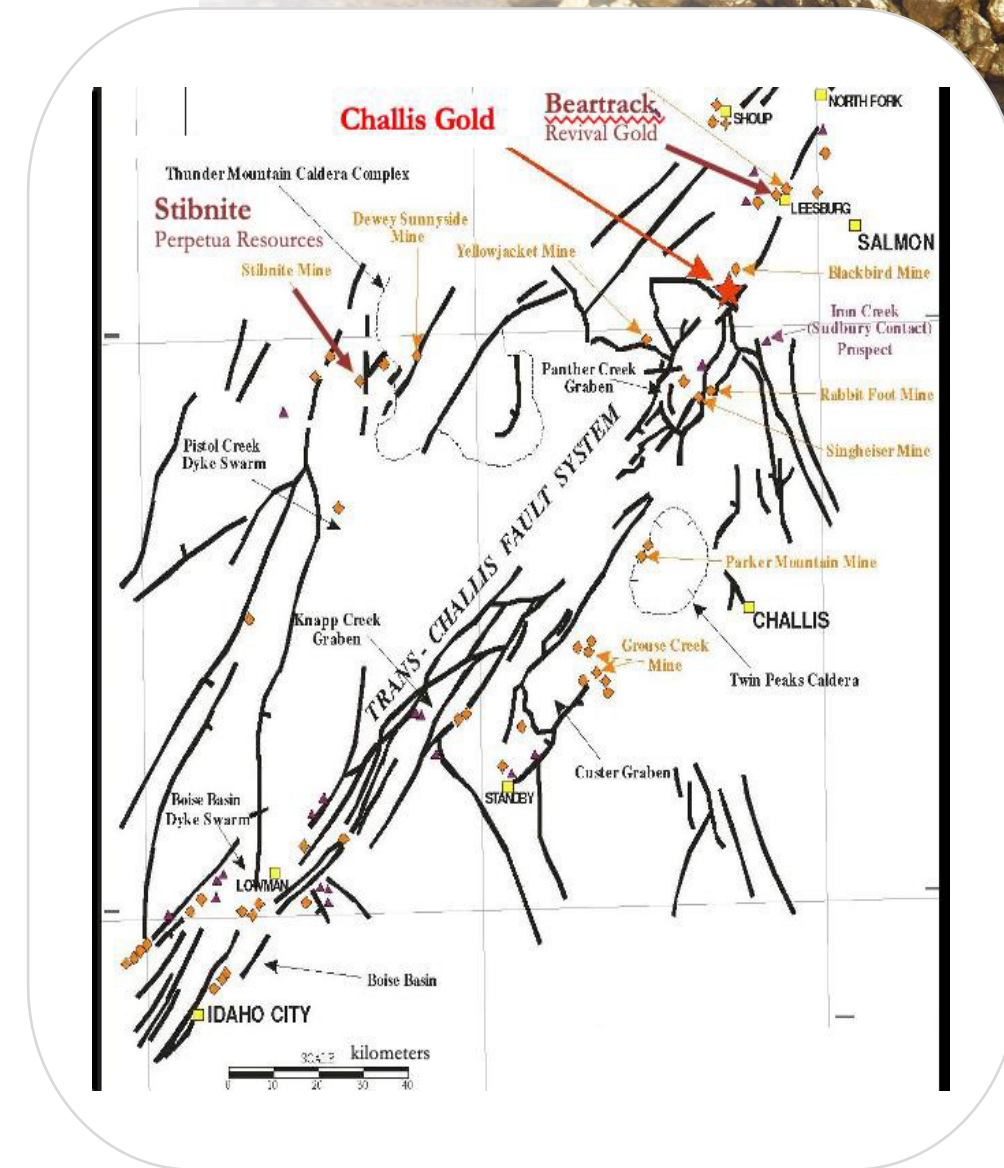

- A mix of core and RC, focused on the Sophia and Greenstone Gulch target areas. Further drilling will be conducted at Nina Skarn in the future
- Discussing potential partnership opportunities at Keystone with industry leading companies

We believe that high priority targets show the potential for promising **Carlin-type gold deposits**

Challis Gold Project - Idaho is a Mining State

- Approved Plan of Operations from USFS
- Challis Gold Project is located about 47 miles SW of Salmon, ID and 12 miles SW of Revival Gold's Beartrack Project, within the Tertiary Challis Volcanic Field
- Challis Gold is a low sulfidation, Au-Ag epithermal vein and stockwork deposit localized along intersecting NW – NE trending shear structures in a window of sedimentary rocks exposed through the Challis Volcanics
- Historical (not-current) 43-101 Resource of approximately 313,825 oz Au at a grade of 1.22 g/t Au, low strip ratio (Johnny's Point)
- Idaho is ranked as world's 8th best mining jurisdiction by the Fraser Institute; higher than any Canadian jurisdiction
- Nearby Idaho mining areas include the Stibnite Au project, Beartrack Au project, Delamar Ag-Au mine, Coeur d'Alene Ag-Zn-Pb mines, Black Pine Au mine and Thompson Creek Mo mine

Environmental

Working towards a future **low carbon footprint** Footprint 

 Exploring carbon offset technology to get to future **Net Zero**

Commitment to land stewardship in partnership with  and local stakeholders and ranchers

Water conservation through dry stack tailings and **potential future water storage facility**  within the open pit

Social

ZERO work-related safety incidents 

Substantial Local Investment in 
Work Force
Consultants
Office

Community Outreach & Community Engagement

Governance

Majority of Board is independent

Female Director Representation

100% Committed to annual ESG review and best corporate governance practices as needed. (Digbee certified)

 Digbee ESG™

Advancing High Quality Assets

- **Promising portfolio**, in stable and mining friendly U.S. jurisdictions, offers investors both potential near-term production and considerable blue-sky exploration.
- Team of **accomplished explorers and proven company builders** who have made, and financed, the discovery and development of numerous world class gold assets.
- CK Gold Project offers **compelling value with very low risk**, and potential near-term production in **mining friendly Wyoming**.
- **Keystone** offers significant potential as a stand-alone district play on Nevada's prolific **Cortez Trend. Challis Gold** believed to be a high potential exploration project located in **Idaho**.
- The company has a **minimal share count** (approximately 16.4M shares outstanding) with large insider holdings - listed on **NASDAQ**.

DEVELOPMENT PACKAGE

Exciting combination of a development stage permitted asset and high potential exploration blue sky

PROVEN TEAM

Top quality management and advisory team with pedigrees of developing renowned gold projects

U.S. COMPANY

U.S. Gold Corp. is a US based company, listed on a major US Exchange – NASDAQ, with US based properties

HIGH UPSIDE

Large growth potential for the current resource and valuation upside based on market comps

Concentrate Grade %Cu – Oxide	%	23
Concentrate Grade %Cu – Mixed	%	21
Concentrate Grade %Cu – Sulphide	%	18
Process Cost	\$/st processed	7
Tailings Cost	\$/st processed	1.65
Site-Wide General & Administrative Cost	\$/st processed	1.50
Rehandling cost	\$/t	1.00

*Refer to the SK-1300 Technical Report Summary from the CK Gold Project Feasibility Study to be released soon. The estimates contained in the tables above may contain values not recognized by the United States Securities and Exchange Commission. See “Cautionary Note Concerning Mineral Resources” in this presentation.

CK Gold Project – Reserve and Resource Estimates (2026)*

Mineral Reserves Statement

	Mass	Gold (Au)		Copper (Cu)		Silver (Ag)		Au Equivalent (AuEq)	
	Tons (Mst)	Oz (000s)	oz/st	M lb	%	Oz (000s)	oz/st	Oz (000s)	oz/st
Proven (P1)	33.8	582	0.017	129	0.191	1542	0.046	872	0.026
Probable (P2)	40.8	433	0.011	130	0.16	1,489	0.037	726	0.018
P1 + P2	74.5	1,015	0.014	260	0.174	3,032	0.041	1,598	0.021

Resource defined by 215 drill-holes, totaling 136,600ft, within the CK Gold Project deposit

Mineral Resources Exclusive of Reserves Statement

	Mass	Gold (Au)		Copper (Cu)		Silver (Ag)		Au Equivalent (AuEq)	
	Tons (000's)	Oz (000's)	opt	lbs (millions)	%	Oz (000's)	opt	Oz (000's)	opt
Measured (M) within Resource Pit Shell, external to Reserve Pit Shell	5,124	38	0.007	13	0.12	278	0.054	64	0.013
Measured (M) within Reserve Pit Shell, below Reserve Cutoff Grade	6,128	43	0.007	15	0.12	314	0.051	71	0.012
(M) within Resource Pit Shell	11,252	81	0.007	27	0.12	592	0.053	135	0.012
Indicated (I) within Resource Pit Shell, external to Reserve Pit Shell	15,602	137	0.009	42	0.13	610	0.039	220	0.014
Indicated (I) within Reserve Pit Shell, below Reserve Cutoff Grade	17,786	146	0.008	46	0.13	681	0.038	235	0.013
(I) within Resource Pit Shell	33,388	283	0.008	88	0.13	1,292	0.039	455	0.014
(M + I) within Resource Pit Shell	44,640	364	0.008	115	0.13	1,884	0.042	590	0.013
Inferred within Resource Pit Shell	47,088	407	0.009	142	0.15	1,436	0.03	677	0.014

High-grade mineralization exposed at the surface surrounded by a large, lower-grade zone with potential for expansion

*Refer to the SK-1300 Technical Report Summary from the CK Gold Project Feasibility Study to be released soon. Reserves tabulated at a cutoff value of \$0.01 based on declared metal values and evaluation parameters. AuEq is calculated on a recovery-weighted basis for the three metallurgical types, oxide, mixed oxidation and sulfide. Note only 3 significant figures shown, may not sum due to rounding. Please see "Cautionary Note Concerning Mineral Resources" in this presentation.
